ROLES & POSITIONS

React developer

Penguin Digital | March 2019 – present

Poverty Stoplight - React Native (*Android*)
I've been part of an agile team working on a mobile platform, operating in South America, that helps people lift themselves and their communities out of poverty. Working closely with a team located in Paraguay. We've been tightly following Scrum process with regular sprints, daily stand up meetings, weekly grooming. Working on accessibility, continuous integration, writing unit tests, continuously adding new features, fixing existing bugs, doing code reviews. Using git flow as a workflow.

Educational platform startup - "Penguin Tribe" (*React, TypeScript, TypeGraphQL, Apollo Client/Server*)
Educational platform for people who want to learn how to code. Some of the features included : solving and unlocking new challenges, gaining experience and levels, reviewing peers' works, interactive charts.

Starting from the ground up, I've been involved in the planning and implementation of the both parts of the platform – the client and the server. The front-end was built using: *React*, *TypeScript*, *Apollo Client*. For the server part we used: *TypeGraphQL*, *Apollo Server*, *Express.js*, *TypeScript*, *MongoDB*.

Front-end Shopify developer

SHOPSOPHEA. | Jun 2017 – Feb 2019

– Continuously building, integrating and optimising modules for our Shopify based webshop using ThemeKit, Liquid, SASS, JavaScript, Shopify's API
– Built an embedded Shopify app, which solves a problem caused by incorrect inventory syncing with our fulfillment service. The app was built by using Shopify's API, fulfillment's service API, Node.js/Express, MongoDB for our back-end and React, Redux, Polaris for our front-end part.

Front-end developer

Adtailor | 2016 – 2018

– In charge of designing and developing numerous pages – API integration, website, blog
– Desgin and integrate static website into WordPress for our newsletter (HTML,CSS, PHP, JavaScript)
– Design and develop CRM system with numerous charts and data tables which communicates with our API (JavaScript, Bootstrap, SASS, Chart.js) .
– Created a demo page which showcase the usage of our product by using JavaScript and Bootstrap

Front-end developer

KayaBrands | Nov. 2014 – Feb. 2019

– Created mockups and UX design for landing pages
– Created skins, took part in enhancing and building features for our webshops using HTML, CSS, JavaScript, PHP
– Being in charge of making the switch from GWT to React/Redux for the client part of our internal CRM system
